# GL-S10 二次开发指南 V1.2 -- GL-iNet

版本	更改项	作者	日期
1.0	第一版	何丰	2020.04.15
1.1	添加修改 efuse	何丰	2021.03.20
1.2	修改样例源码配置步骤	钟尚文	2021.03.30

# 目录

GL-S10	二次开发指南 V1.2 GL-iNet	1
1.	开发环境搭建	3
	1.1 样例源码下载	3
	1.2 SDK 配置	4
2.	固件编译	4
3.	固件烧录、debug 调试	5
	4.1 串口连接 GL-S10 与 PC	5
	3.2 固件烧录	6
	3.3 debug 调试	7
4.	OTA 升级固件	7

#### 使用环境:

1. Linux Ubuntu

```
No LSB modules are available.
Distributor ID: Ubuntu
Description: Ubuntu 20.10
Release: 20.10
Codename: groovy
```

2. Python 3

```
Python 3.8.6 (default, Sep 25 2020, 09:36:53)
[GCC 10.2.0] on linux
Type "help", "copyright", "credits" or "license" for more information.
>>>
```

3.git

```
zsw@mylinux:~$ git --version
git version 2.27.0
zsw@mylinux:~$
```

#### 1. 开发环境搭建

根据如下官方链接搭建 SDK 环境:

https://docs.espressif.com/projects/esp-idf/en/release-v3.3/get-started/index.html#, 并按链接所示成功编译 hello\_world Demo 然后再进入下一步

若在过程中遇到如下错误:

```
csembounts://espings.id/compnies/get.aserted/hells.worlefs.nake
nake[1]: Entering directory /home/zsus/espings/fitpols/kconfig/mconf.c -o mconf.o
cc -o DCUBSES_LOGG*
cc -o DCUBSES_LOGG*
cc -o DCUBSES_LOGG*
ccompand_Luter: Intil x=ror. -o DCCALE -MMO -MP /home/zsus/esp'esp-ldf/tools/kconfig/mconf.c -o mconf.o
ccompand_Luter: Intil x=ror. curses.h: No such file or directory
complation terminated.
nake[1]: Leaving directory /home/zsw/esp/esp-idf/tools/kconfig/norf-ldf*, needed by 'home/zsw/esp/esp-ldf/examples/get-started/hello_world/build/include/config/auto.conf*. Stop
nake: ***No rule to nake target 'home/zsw/esp/esp-idf/tools/kconfig/norf-ldf*, needed by 'home/zsw/esp/esp-ldf/examples/get-started/hello_world/build/include/config/auto.conf*. Stop
```

说明你有组件没安装,在终端输入 sudo apt-get install libncurses5-dev 回车,然后再执行一遍 make -j99 命令即可。

```
Cenerating [18]Libodium.a.sections_info
Generating [18]Libodium.a.sections_info
Genera
```

出现 make flash 说明你的 IDF 环境搭成功.

### 1.1 样例源码下载

cd

cd esp

git clone https://github.com/gl-inet/s10.git

### 1.2 SDK 配置

注:本指南以下内容皆以 ESP-IDF (linux) 为开发环境编写,部分步骤在其他平台不能通用。

- \*进入 IDF 目录下,切换 commit 到 "bf022060964128556b3d3205b65c5d35df9beef6"
- \*若不切换则可能会影响 S10 的麽些功能异常

cd esp-idf/

git checkout.

git reset --hard bf022060964128556b3d3205b65c5d35df9beef6 看到如下输出这为成功切换:

zsw@mvlinux:-/tmp/esp-idf\$ git reset --hard bf022060964128556b3d3205b65c5d35df9beef6
HEAD 现在位于 bf0220609 Merge branch 'ci/workaround\_multiple\_ci\_failures\_v3.3' into 'release/v3.3'

git submodule deinit -f .
git submodule init
git submodule update
export IDF\_PATH=~/esp/esp-idf/

cd ../s10/demo/BLE-Gateway-Demo

## 2. 固件编译

注:编译样例前请先确认您的开发环境(ESP-IDF)是否已搭建成功。

make -j99

首次编译出现如下对话框请用方向键选择到 Exit,然后按下回车退出,退出后会继续编译

初次编译用时会较长,当打印如下信息时即为编译完成。

```
AR build/bt/libbt.a.sections_info
Generating libbt.a.sections_info
Generating esp32_project.ld
Lo build/gi-si0_elf
esptool_pv_v2.8-dev
To flash all build output, run 'make flash' or:
python /mnt/hgfs/workspace/esp32/IDF/esp-tdf-v3.3/components/esptool_py/esptool/esptool.pv --chip esp32 --port /dev/ttyU580 --baud 115200 --before default_res
et --after hard_reset write_flash -z --flash_mode dio --flash_freq 88m --flash_size_detect_08000 /mnt/hgfs/workspace/esp32/project/esp32_ble_bridge/build/potaddat_initial.bin 0x18000 /mnt/hgfs/workspace/ps3p2/project/esp32_ble_bridge/build/potaddar_bin 160000 /mnt/hgfs/workspace/esp32/project/esp32_ble_bridge/build/partitions.bin
prot@bubnut_int_nfs/gworkspace/esp32/project/esp32_ble_bridge/build/partitions.bin
```

## 3. 固件烧录、debug 调试

## 4.1 串口连接 GL-S10 与 PC

GL-S10 引出了一路 uart, uart0 用于烧录和 debug 打印;

如图所示,uart0 从右往左分别是: TX/RX/GND。用户可使用 USB 转 uart 将 GL-S10 连接 到 PC 上。Uart0 默认的波特率为 115200,数据位 8,停止位 1,校验位 0。

### 3.2 固件烧录

开始烧录前,请先将 GL-S10 连接至 PC,按住图中所示的 BUTTON1,然后上电。请注意此时的 GL-S10 连接的是否是/dev/ttyUSB0。

如果您使用 linux 的 esp-idf 环境,可以直接使用"make flash"指令烧录。当打印出如图所示的信息,表示当前已烧录完成。

```
Toolchain version: crosstool-ng-1.22.0-80-g6c4433a
Compiler version: 5.2.0
Python requirements from /mnt/hgfs/workspace/esp32/IDF/esp-idf-v3.3/requirements.txt are satisfied.

App "gl-s10" version: 1.10
Flashing binaries to serial port /dev/ttyUSB0 (app at offset 0x10000)...
esptool.py v2.8-dev
Serial port /dev/ttyUSB0
Connecting....
Chip is ESP3200W005 (revision 1)

```

如果您使用的是 window 的环境,并且从样例仓库的 release 目录下下载了固件,可以直接使用 flash 下载工具烧录固件(不需要 IDF 环境)。

Flash 工具下载地址:

https://www.espressif.com/sites/default/files/tools/flash download tools v3.6.8 0.zip

#### 3.3 debug 调试

debug 调试也是通过烧录的串口进行。在 GL-S10 烧录完成后,输入"make monitor"。 当打印出如图所示的信息后,将 GL-S10 重新上电,即可看到 debug 打印。

```
Toolchain version: crosstool-ng-1.22.0-80-g6c4433a
Compiler version: 5.2.0
Python requirements from /mnt/hgfs/workspace/esp32/IDF/esp-idf-v3.3/requirements.txt are satisfied.
MONITOR
--- idf_monitor on /dev/ttyUSB0 115200 ---
--- Quit: Ctrl+] | Menu: Ctrl+T | Help: Ctrl+T followed by Ctrl+H ---
```

#### 4. OTA 升级固件

出厂的 GL-S10 固件都带有 OTA 升级的功能。如果您不希望通过拆壳连接串口烧录,也可以使用 OTA 更换固件。

GL-S10 的 OTA 是通过 http 访问服务器获取固件,相关操作步骤见 GL-S10 BLE-Gateway User Guide
